Rusticline 6T-piece 3/4", RT-25, black

Overview

Black connector RT-25 with 6 openings for the Rusticline tube shelving system. Used to join six threaded components (pipes, fittings, end caps, etc.). Vintage design: The black 6T-connector has a distinctive industrial look, featuring rounded shapes, a rough surface finish and great versatility. Easy assembly: The connector is compatible with many components from the Rusticline shelving system. Elements are joined by screwing together without the use of tools. The Rusticline tube system is intended for decorative purposes only and does not function as water piping. For help assembling the Rusticline tube system, refer to our article [Overview of Components and Assembly Tips](#).

Key Technical Specifications

Depth	65 mm
Width	65 mm
Colour	Black
Height	65 mm
Weight	0.322 kg
Diameter	25 mm
Material	Malleable cast iron

Key Points

- Step into the role of interior designers and build shelves, racks, wardrobes or tables to your own taste. The Rusticline shelving system offers unlimited possibilities for combining individual elements in a water-pipe design.
- The black 6T-connector RT-25 is used to join six screwed Rusticline components. Thanks to its 90° bend and extensive branching, it expands the creative possibilities of the shelving system. It is ideal, for example, for connecting the frames of multiple shelves and racks. How you use this connector in

your projects is entirely up to you. Easy assembly is a matter of course – simply screw the threaded elements into the connector without any tools.

- Industrial style has a firm place in contemporary interior design. It is built on dark colour schemes and the use of structural elements and building materials. Our Rusticline shelving system stands on these same pillars, borrowing pipe elements and repurposing them.
- Given the emphasis on decorativeness, each component of the tube system is thought through to the last detail. You will find stamped marks, protrusions and a characteristic grainy surface that mimics the appearance of cast iron. Original decorative accents include shut-off valves and taps that catch the eye at first glance.
- Pipes, elbows, flanges, connectors and other Rusticline elements can be freely combined. This makes it simple to create home accessories or one-of-a-kind pieces of furniture that fit your interior perfectly in both shape and size.
- On the other hand, there is no point in laboriously designing products that someone else has already created. That is why we have prepared assembly kits containing all components including installation hardware. Products with shelves do not have pre-drilled holes, so the placement of the supporting elements is flexible – you can easily customise kit furniture and accessories to suit your needs.
- A pantry shelving unit, a wall-mounted shelf, a wall coat rack... The full list of possible uses for the Rusticline system would be very long indeed!
- Thanks to its sturdy construction and easy board attachment, the tube system is ideal primarily for building shelves and racks of various sizes.
- The system also lends itself to the creation of original furniture pieces. Pipes can serve as legs for a coffee table or the base of an original bar stool. The elements are also suitable for making home accessories such as a wine rack or a towel holder.
- With a little skill, the components can be combined with other materials and objects, such as solid wood boards or lighting elements (bulbs, LED strips). Awaken your creative spirit and become an innovator. With Rusticline elements, the door is wide open.
- Assembling the furniture or accessories takes only a short time. Pipes, connectors and other parts are fitted with threads, so you simply screw them together. Flanges are then screwed to boards or into the wall with screws and you are done.
- For all assembly kits we have prepared clear installation guides, available on the Rusticline website. You can easily assemble even larger pieces of furniture, such as a wardrobe rail, without any prior experience:
- The Rusticline shelving system is designed not only to look attractive, but also to withstand everyday use and heavier loads.
- Components are made from solid steel with a powder-coat finish that is resistant to scratching, water and cleaning agents. You can use your creations without any issues even in the bathroom or kitchen. The pipes will also withstand the claws of pets and will retain their appealing industrial look for many years to come.
- Intrigued by the concept of a tube shelving system? Start creating! You will find a great dose of inspiration on the Pinterest board we have carefully put together for you. You will be surprised at everything that can be made from a few water pipes, elbows, connectors and taps.
