Rusticline pipe 3/4", 100mm, RT-10, black

Overview

Black screw-on pipe RT-10 with a length of 100 mm for the Rusticline tube shelving system. Easy assembly: The pipe is compatible with all Rusticline connectors and end caps. Elements are joined by screwing together without the use of tools. The Rusticline pipe system is intended for decorative purposes only and does not function as water supply plumbing. For help assembling the Rusticline pipe system, refer to our article [Component Overview and Assembly Tips](#).

Key Technical Specifications

Colour	Black
Length	100 mm
Diameter	25 mm
Material	Steel

Key Points

- Step into the role of interior designers and build shelves, wall units, wardrobes or tables to your own taste. The Rusticline shelving system offers unlimited possibilities for combining individual elements in a water pipe design.
- The black screw-on pipe RT-10 with a length of 100 mm is one of the most widely used elements of the Rusticline shelving system. It is most commonly used for horizontal mounting perpendicular to the wall, providing sufficient clearance from the surface. It is an important part of load-bearing structures for shelves, brackets and hangers. These pipes in an industrial design can be found, for example, in the simple shelf kit or the shoe rack set.
- The industrial style has a firm place in contemporary interior design. It builds on dark colour schemes and the use of structural elements and building materials. Our Rusticline shelving system stands on these same pillars. It takes water pipe components and transforms their original purpose.

- Given the emphasis on decorativeness of the pipe system, each individual component is thought through to the last detail. You will find stamped markings, protrusions and a characteristic grainy surface that imitates the look of cast iron. Original decorative accents include shut-off valves and taps that catch the eye at first glance.
- Pipes, elbows, flanges, connectors and other Rusticline system elements can be freely combined. This way you can easily create home accessories or unique pieces of furniture that fit perfectly into any interior in terms of shape and size.
- On the other hand, there is no point in laboriously designing products that someone else has already conceived. That is why we have prepared assembly kits for you that include all components along with installation hardware. Products with shelves do not have pre-drilled holes, so the placement of the supporting elements is variable. You can easily customise furniture and accessories from the kits to suit your needs.
- A pantry shelving unit, a wall-mounted shelf, a wall coat rack... The list of all possible uses of the Rusticline system would be truly long!
- Thanks to the sturdy construction and easy attachment of boards, the pipe system is ideal above all for making shelves and shelving units of various sizes.
- The system also finds its use in the creation of original furniture. The pipes can serve, for example, as legs for a coffee table or as the base of an original bar stool. The elements are also suitable for making home accessories such as a wine rack or a towel holder.
- With a little skill, you can combine the components with other materials and objects, for example with solid wood boards or lighting elements (bulbs, LED strips). Awaken your creative spirit and become an innovator. With Rusticline elements, the door is wide open.
- The actual assembly of the furniture or accessories will only take a moment. The pipes, connectors and other parts are threaded, so you simply screw them together. The flanges are then screwed to the boards or into the wall with screws and you are done.
- For all assembly kits, we have prepared clear installation guides available on the Rusticline website. You can easily assemble even larger pieces of furniture without prior experience, for example a wardrobe rail holder:
- The Rusticline shelving system is designed not only to look attractive but also to withstand everyday use and heavier loads.
- The components are made from solid steel and surface-finished with powder coating. This is resistant to scratching, water and cleaning agents. You can use your creations in the bathroom or kitchen without any problems. The pipes will also resist the claws of pets and will retain their eye-catching industrial look for many years.
- Has the concept of a pipe shelving system caught your attention? Start creating! You will find plenty of inspiration on the Pinterest board we have carefully put together for you. You will be surprised at everything that can be made from just a few water pipes, elbows, connectors and taps.
