BULL FLOAT KIT

Overview

The float is used for smoothing concrete poured over large areas. The special vibrating head attached to the float causes it to cycle, resulting in a better smoothed concrete surface. The operator can use the float to smooth the surface at a distance of about 5 m from where they stand. The float (set) consists of five elements: a smoothing plate with rounded sides, made of hardened aluminum (plate size: 120 x 20 cm; thickness approx. 6 mm); a vibrating head mounted on the float and folded; 3 segments of lightweight aluminum handle (3x 180 cm; dia. approx. 45 mm). For effective smoothing of freshly poured concrete. Working range of the float about 5 m from the operator. To smooth concrete, rhythmically rotate the handle tube to the left and then to the right. This movement is converted in the head into the movement of the working plate, smoothing the concrete. This increases the effectiveness and efficiency of the work. Working bar 1 piece, vibrating head 1 piece, folding handle pipe 3 pieces.

Key Technical Specifications

Size	1200x200 mm
Brand	Yato
Symbol	YT-30900
Material	aluminum
Application	for smoothing concrete poured on large surfaces
Set includes	workboard, vibration head, folding handle tube x3
Producer code	5906083078057
Working range	approx. 5 m
Length of handle	180 x3 cm

Key Points

- Smoothing plate with rounded sides, made of hardened aluminum (plate size: 120 x 20 cm; thickness approx. 6 mm)
- Vibrating head mounted on the float and folded
- 3 segments of lightweight aluminum handle (3x 180 cm; dia. approx. 45 mm)
- Working range about 5 m from the operator
- Rotating the handle tube converts to plate movement for effective smoothing
