SAFETY GLOVES WITH TOUCHSCREEN FINGERS NITRILE SIZE 9

Overview

Protective work gloves made of orange nylon with a dense stitch, coated in the gripping area with black foamed nitrile featuring a special additive that allows for smooth touchscreen operation on devices such as smartphones and tablets. Nitrile is resistant to gasoline, diesel, paraffin, most solvents, and lubricants. The foaming process improves grip on wet and slightly oiled surfaces. The seamless nylon construction ensures good resistance to workshop chemicals and maintains flexibility longer than their polyester counterparts. The gloves will not stretch over time and will fit well even after many weeks of use. The fine 15G stitch, which means 15 stitches per inch, primarily provides a better fit to the hand, positively affecting work precision. Features a nitrile foam coating in the gripping area, a nylon outer part, a 15G stitch, and an elastic cuff. The special coating blend restores electron flow, allowing for smooth touchscreen operation to the same extent as with a bare hand.

Key Technical Specifications

Size	9
Brand	Yato
Pairs	1
Symbol	YT-74755
Material	nylon, nitrile
Standard	EN 388:2016
Producer code	5906083071980
Cut resistance	x
Tear resistance	2
Abrasion resistance	3
Protection category	II

Puncture resistance	1
Blade cut resistance	1

Key Points

- Gripping area: nitrile coating, foam type
- Outer part: nylon
- Stitch: 15G
- Elastic cuff
- Touchscreen-compatible fingers for smartphone and tablet operation
- Nitrile resistant to gasoline, diesel, paraffin, most solvents and lubricants
- Seamless nylon construction resistant to workshop chemicals
- Size 9
