fischer FixTainer - UX GreenLine

Overview

The fischer universal fixing UX GreenLine is a plastic fixing made of high-quality nylon. At least half of the materials used to create the granules for producing the anchor are gained from sustainable raw materials. The environmental sustainability of the GreenLine has been independently validated and certified in accordance with the GREEN BRANDS Standard. The UX GreenLine has the same performance properties same and load-carrying properties as the grey-coloured original. The fischer universal fixing expands in solid building materials and knots in hollow building materials for maximum hold. For this reason the fischer UX is always the correct choice – even with unknown building materials. The FixTainer boxes come with a carry handle and transparent lid. They can be firmly connected together and thus stacked. In addition, they are compatible with the Sortimo L-Boxx system.

Top Features
